American Heart Association

The course for which you are enrolled may include physical strain, possibility for cross infection and emotional stress. CPR is very strenuous both in practicing on the manikin and performing CPR on a cardiac arrest victim. If you have any medical conditions or cardiovascular disease history that may be aggravated by this course, please consult your physician as to whether you should participate in a CPR course. If you have any reservations about your ability to perform CPR on a cardiac arrest victim, you may want to reconsider taking this course. If you have recently had any infectious disease, including upper respiratory infection or open sores on your mouth and/or on hands, it is imperative to defer manikin practice. The American Heart Associate strongly promotes knowledge and proficiency in BLS, ACLS and PALS and has developed instructional materials for this purpose. Use of these materials in an educational course does not represent sponsorship by the American Heart Association. Any fees charged for such a course, except for a portion of fees needed for AHA course materials, do not represent income to the Association.

I have read all the above statements and absolve the American Heart Association of Colorado/Wyoming and it's instructors from any liability associated herewith. I do not currently have any infectious disease.
